

Cabinets and Fine Furniture made from Mt. Baker Products Hardwood Plywood are meant to be enjoyed for many years to come. Quality woodworkers know that even the best craftsmanship cannot stop wood boring insects and termite infestations from dramatically reducing the life of their creations.

Mt. Baker Products InsectaGuard premium hardwood plywood panels use Lonza Wood Protection additives to fight infestation by wood boring insects and termites. The most aggressive and destructive of these wood destroying insects, the Formosan termite, originated in eastern Asia and continues to expand its habitat through the Hawaiian Islands and Southeastern United States. InsectaGuard's protection level is laboratory tested and confirmed by Lonza to combat infestation including the Formosan termite!

Mt. Baker Products' InsectaGuard hardwood plywood panels are always produced using Soy Adhesive Technology with No Added Formaldehyde, so both your wood products and your air quality will be safe!
